# OTTO SCHOCH AG

*Founded in 1964, the company concentrates on the sale of cable lugs and the special tools required for their processing. The product range for railway infrastructure has been continuously expanded for over 30 years, in close cooperation with partners. Track maintenance machines and tools have been developed to satisfy the specific requirements of the industry. This means increasingly rapid interventions and paying ever closer attention to the safety of the operating personnel, as well as environmental protection. Today, service and training are just as important as sales. The entire product range is calibrated and repaired in our in-house calibration and service centre. We also offer extraction tests in combination with a grinding pattern analysis.*

## Expertise

Our long-standing, skilled and experienced employees in the fields of electrical connection, railway and screwdriving technology are our capital.

## Innovation

Innovation lies at the heart of our work. We encourage our employees to think creatively. This allows us to devise impressive solutions for our customers.

## Flexibility

Logistics solutions such as just-in-time deliveries based on framework contracts and demand forecasts, or the maintenance of minimum inventory levels, are a matter of course for us.

## Customer focus

Special tool manufacture in accordance with customer specifications, as well as single-unit products and small-batch series, are also an integral part of our customer-oriented standard.

*Quality is our basis for the trust of our customers. We are an ISO 9001 and 14001 certified company.*

# RAILWAY APPLICATIONS

Otto Schoch offers a range of machinery and solutions for maintaining and servicing track systems and overhead line constructions in rail transport. Because the machines are frequently used on previously installed tracks, it is important that they are easy to transport, take up little space, and guarantee the safety of the operator as well as compliance with environmental protection requirements. When developing the machines, we therefore place great value on their ergonomics and low noise pollution. Products sold by Otto Schoch are developed within the framework of a continuous exchange of ideas and expertise, by pros for pros. During the design process, experience and passion go hand-in-hand: This results in powerful, reliable, safe and high quality products, which are harmonised with the environmental protection requirements.

Sleeper drilling machine

Impact wrench

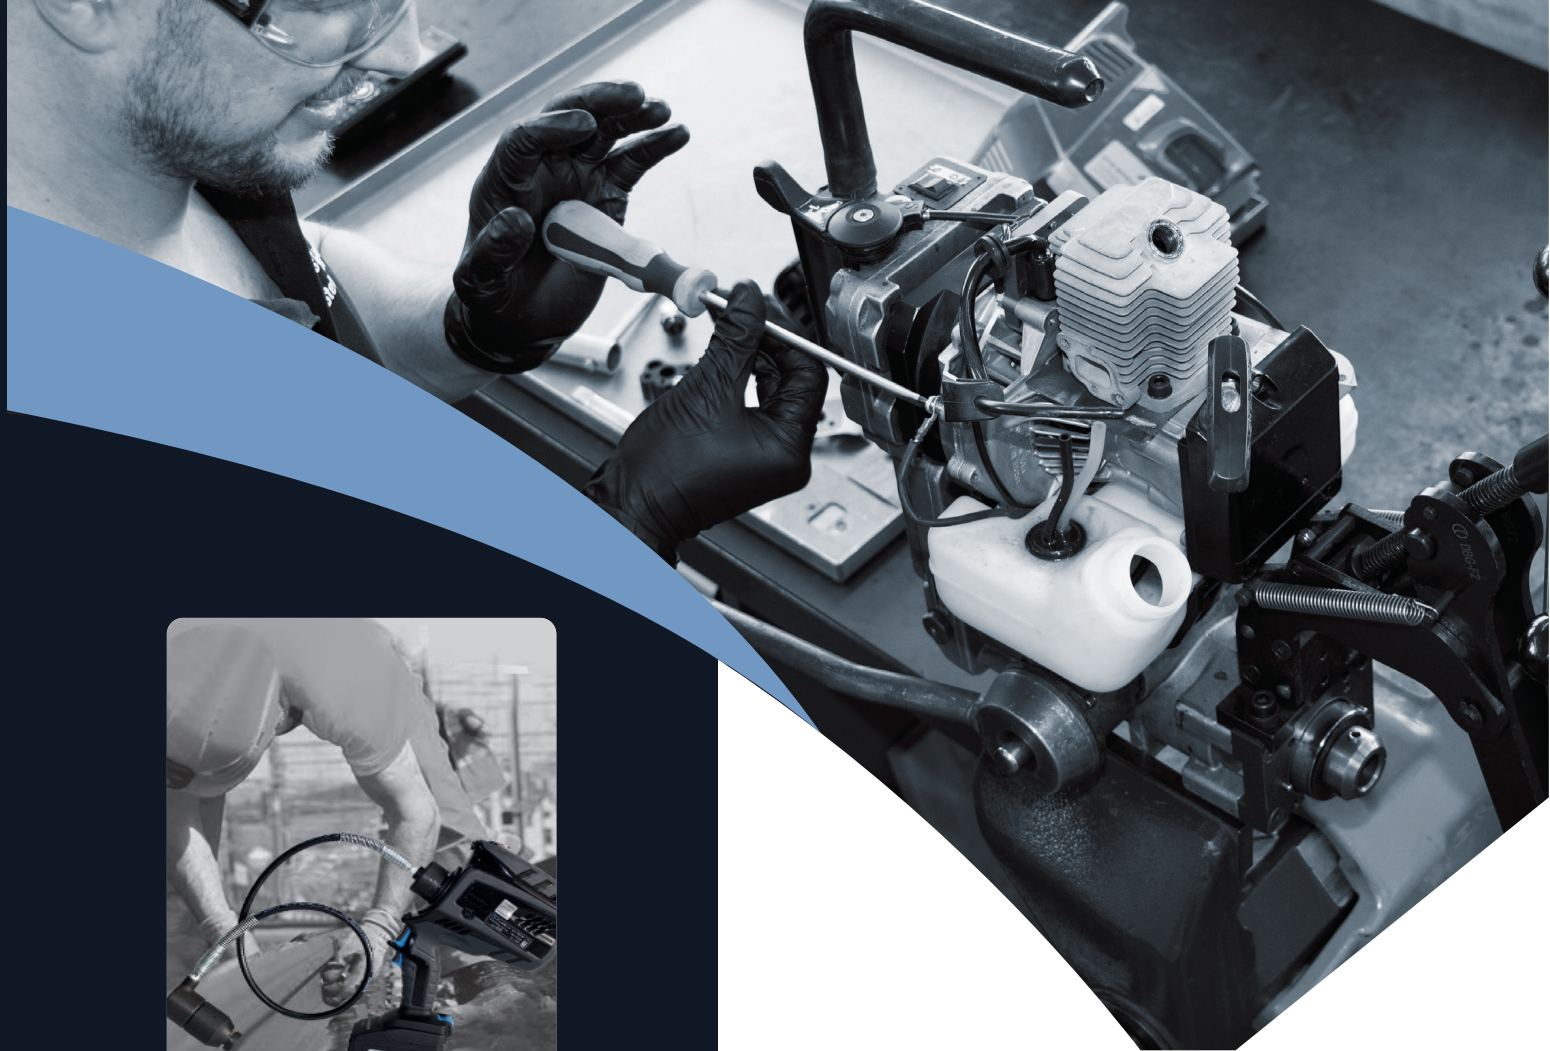

Temporail clamp

IBAV extraction device

Rail riveting tool

Rail disc saw

## SCHOCH DRILL SHARPENING SERVICE

The Schoch drill sharpening service includes incoming inspection, basic cleaning, re-sharpening, pointing, deburring and the final quality control.

We use an optical precision drill sharpening machine from Berger Thun for sharpening and grinding spiral drills. Grinding is kept to the necessary minimum, in order to achieve the longest possible service life of the spiral drill.

## REPAIR AND MAINTENANCE

Only tested products leave our site. However, if you should experience a problem with one of our tools please contact us right away.

We repair all tools supplied by us in our service centre. Our service technicians, who possess years of experience in the field of hydraulics for example, will be happy to perform annual or periodic maintenance work for you. This ensures and guarantees faultless function and a long service life.

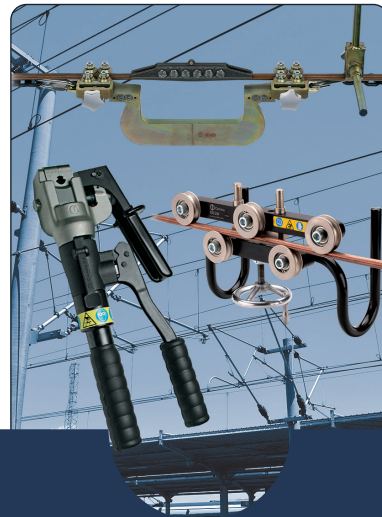

Printing systems

Crimping / Cutting

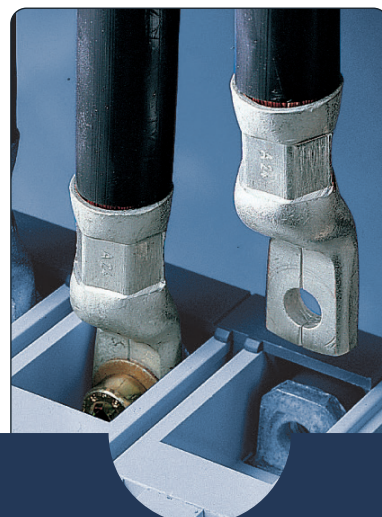

Catenary tools

Catenary post-insulation

Cable labelling

Cable lugs

Torque wrenches

Power sockets

Nut runners

# Our partners

Even more successful together is our motto, upon which we base selection and cooperation with our business partners. The customers of today have high expectations due to the wide range of products on offer. They are increasingly demanding tailored solutions. It is therefore even more important to have the right partners and to adopt a clear position together on the market.

## CEMBRE

---

CEMBRE SpA is one of the leading manufacturers of machinery for maintaining and servicing railway lines.

## ITH SCHRAUBTECHNIK

---

ITH is a world-leading system supplier of screwdriving technology. The company's product range includes hydraulic, pneumatic and electric screwdriving tools for tightening and loosening industrial screw connections.

## TE CONNECTIVITY

---

TE offers insulation and protection solutions for substations, earthing cables, overhead lines and railway engineering applications. These products are highly regarded around the world, thanks to their safety and reliability.

## HELLERMANN TYTON

---

For over 75 years, HellermannTyton has been a leading provider of products for bundling, fastening, protecting and marking cables and lines, as well as their connection components.

## MOMENTO

---

Power socket inserts are the vital link between screwdriver and screw connection. MOMENTO has been specialising in their production for 70 years.

## TOHNICHI

---

TOHNICHI MFG. CO. LTD. is Japan's largest manufacturer of professional torque tools and test equipment.

## CARL WALTER

---

The tools from CARL WALTER have stood for first-class innovative strength and quality since 1919. Today, the company is one of Germany's leading tool manufacturers with a range of over 13,000 items.
